Re: Aluminum City Residential Well Sampling Program Schedule Change

Dear _____,

Thank you for participating in Columbia Falls Aluminum Company's (CFAC) Aluminum City residential well sampling program. This quarterly sampling program was initiated in 2014 by CFAC in response to our neighbors' request. The results of several years of quarterly sampling indicate there are no CFAC-related groundwater impacts in Aluminum City. We will continue to offer residential well sampling, but will adjust the schedule from quarterly sampling to sampling twice per year.

The September 2018 Aluminum City sampling event will be the last residential well sampling event for 2018. This sampling will align with the fall schedule for sampling the 72 groundwater monitoring wells located on CFAC property. Beginning in 2019, Hydrometrics will sample Aluminum City residential wells twice per year, once in the spring and once in the fall. This will allow sampling to occur during periods of high and low groundwater. Hydrometrics will continue to provide you with sampling results and will code the data so that sampling results for individual wells remain anonymous.

Anyone in Aluminum City is eligible to participate in this residential well monitoring program. Please feel free to provide my contact information to any interested neighbors and I will notify Hydrometrics to add their residence to the sampling list. My contact information is provided below. Alternatively, you may provide their contact information to me and I will follow up with them.

Regards,

Steve Wright
